

RESEARCH PROJECT: MAPPING HIDING PLACES

The *Mapping Hiding Places* project is an initiative of Dr. Dienke Hondius, assistant professor of history at Vrije Universiteit Amsterdam, to investigate Jewish hiding places in Europe. To begin with, this is done by mapping places: locations that were used by Jews for shorter or longer periods during the occupation years as hiding places. This information is often still kept in the memory of surviving relatives or of survivors, of local residents, and in various books, articles, interviews and other sources. Now it is time to bring this widely dispersed information together to gain more insight into the histories, memories and legacy of Jewish hiding in Europe during the Holocaust.

A lot of information is available, but a lot is still unknown. You can add information about hiding locations. In the course of time, better knowledge and insight will grow.

WHY DO WE USE MAPS?

Maps are a powerful tool for transferring information. Maps can help with visualizing hiding histories. Digital and interactive maps can also be used to gain new knowledge.

DO YOU HAVE INFORMATION ABOUT HIDING PLACES?

We focus on all kinds of locations where Jewish men, women or children were in hiding during the occupation. If you have information about a hiding place, you can easily add this to the database by using this QR code or this link.

Via this link you can reach the form to add information. Incomplete information is also very welcome. This is the start of a long-term research project that will continue to grow.
