

Supplementary figure 1. Trait correlations of height between different ages from 1 to 19 years of age in males (upper triangular matrix) and females (lower triangular matrix).

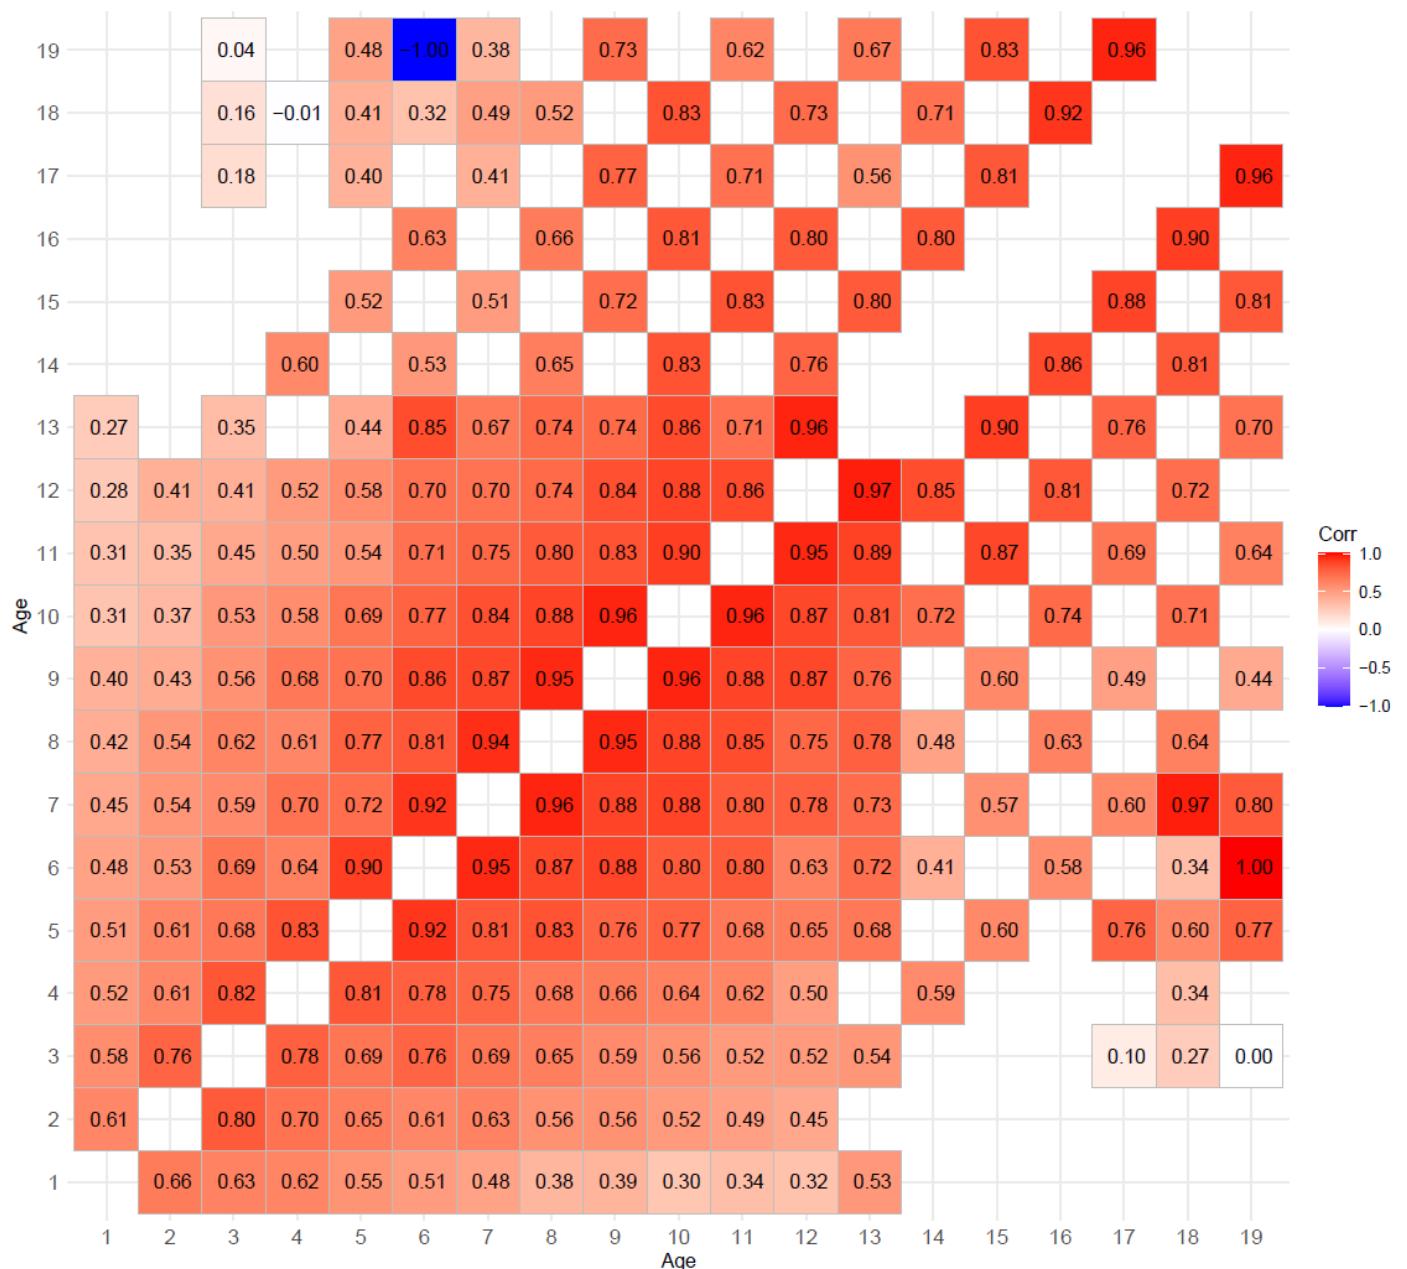

Supplementary figure 2. Additive genetic correlations of height between different ages from 1 to 19 years of age in males (upper triangular matrix) and females (lower triangular matrix).

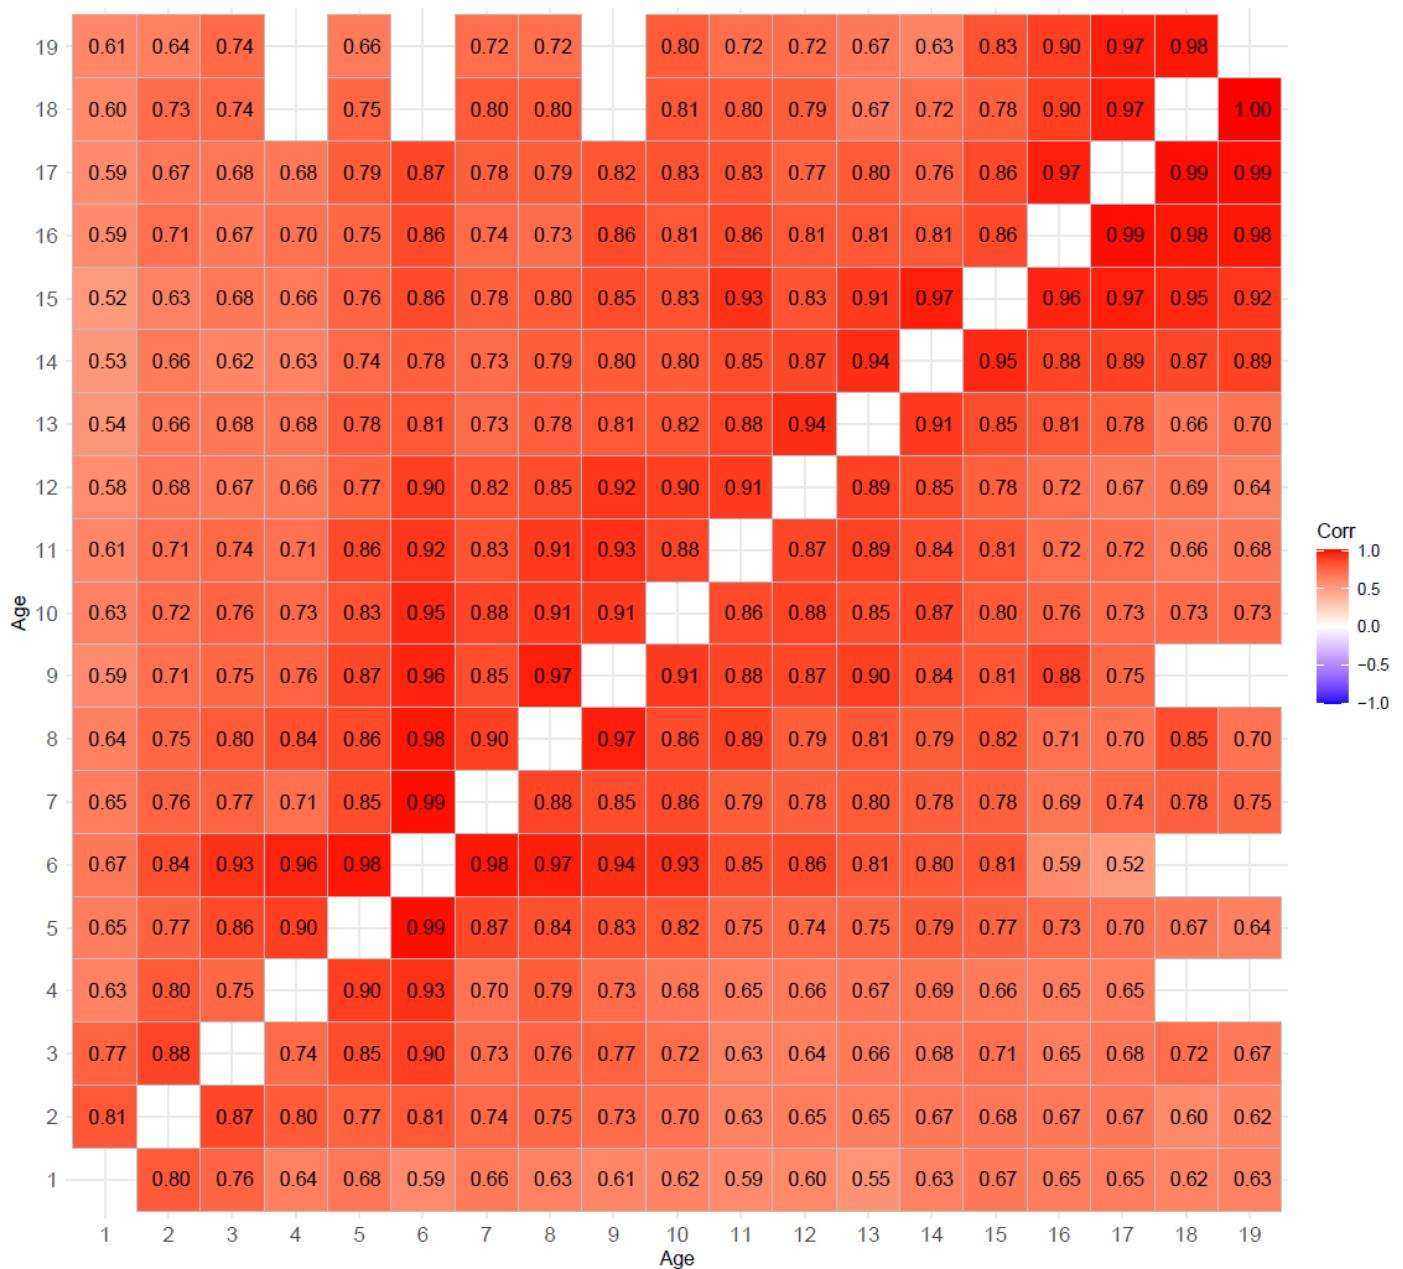

Supplementary figure 3. Unique environmental correlations of height between different ages from 1 to 19 years of age in males (upper triangular matrix) and females (lower triangular matrix).

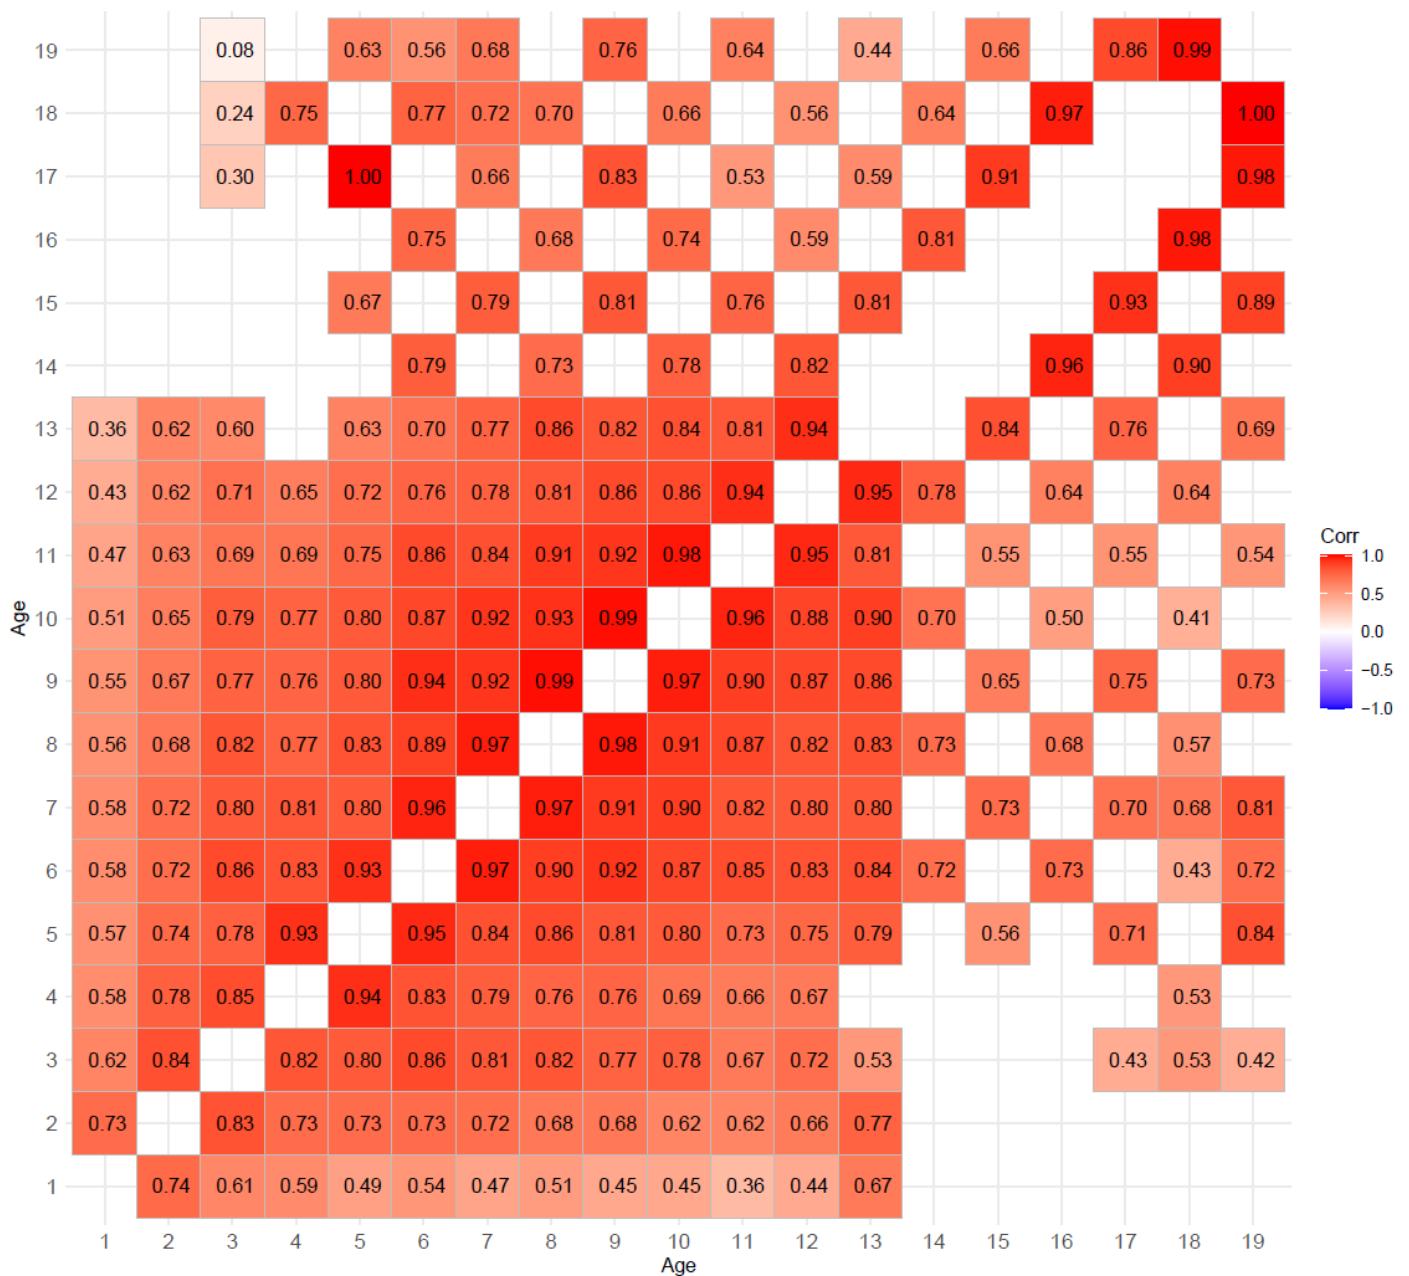

Supplementary figure 4. Additive genetic correlations of BMI between different ages from 1 to 19 years of age in males (upper triangular matrix) and females (lower triangular matrix) in European twin cohorts.

Supplementary figure 5. Additive genetic correlations of BMI between different ages from 1 to 19 years of age in males (upper triangular matrix) and females (lower triangular matrix) in Japanese twin cohorts.

Supplementary figure 6. Additive genetic correlations of height between different ages from 1 to 19 years of age in males (upper triangular matrix) and females (lower triangular matrix) in European twin cohorts.

Supplementary figure 7. Additive genetic correlations of height between different ages from 1 to 19 years of age in males (upper triangular matrix) and females (lower triangular matrix) in Japanese twin cohorts.

Supplementary table 1. The number of observations for males (upper triangular matrix) and females (lower triangular matrix) for each age and sex combination from 1 to 19 years of age.
